

POLAR CLIMATE:

the long and the short of it

The Wilbrahams' Environment Group

were so pleased at the response to last year's talk by **Dr Robert Mulvaney of the British Antarctic Survey**, they've invited Robert back for an update.

If you missed it last time, don't worry, as he will be explaining all about the deep ice drilling still taking place, and the very long climate changes now understood because of this important work.

He will also be shedding some light on life in the field, as well as highlighting the more modern climate changes we're seeing today – in particular, recent changes seen at the North and South poles.

It's going to be a fascinating evening!

Monday 16th October at 7.30pm
Wilbrahams' Memorial Hall
